

SCORM Player 365

Deliver and track SCORM-based training with SharePoint Online

- Go live in minutes
- Manage global access
- Track learner results and create reports
- Capitalize on SharePoint

Finalist for 'Best SharePoint App' 2014

- A powerful, lightweight app that turns Office 365 into an instant e-learning platform
- Train without an LMS

Key benefits

- Setup training quickly and make it available to learners within minutes.
- Upload any number of SCORM training packages and manage the settings for each package.
- Track learner progress and results.
- Use existing infrastructure to deliver training that works with single sign-on.

Challenge

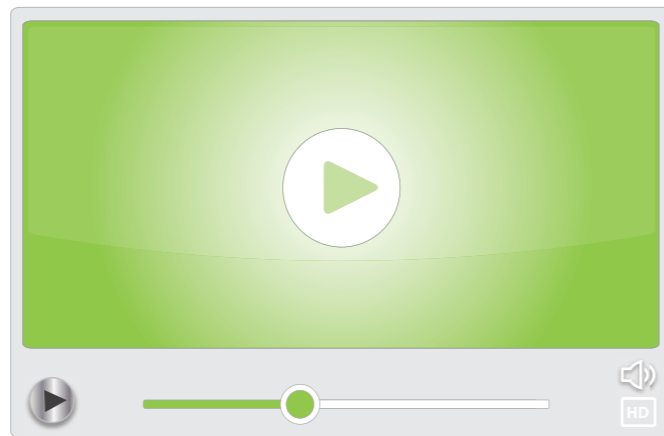

Many companies look for cost-efficient ways to deliver learning materials to their employees. Cloud-based solutions offer an attractive, efficient way to deploy training without the complexity of a large-scale LMS implementation.

Using the company's existing Office 365 account for this purpose is especially tempting, because it would offer a way to deliver training everywhere it is needed without the expense of setting up a separate proprietary, cloud-based training solution.

Because user access has already been configured, organizations would be able to roll out any training process in minutes. And because SharePoint Online's

collaborative power is available throughout the training experience, the organization would be able to engage with, train, and connect global workforces and students in a highly productive way, all with a single sign-on.

Up until now, however, using Office 365 as an e-learning platform has proven to be difficult, mostly because of a complete lack of ready-to-use apps that deliver the necessary expertise and integration.

Why SCORM Player 365?

- Eliminates the need to roll out and support expensive, third-party solutions for cloud-based training.
- Enables companies to deliver training that takes advantage of the full power of SharePoint Online.
- Creates a seamlessly integrated Office 365-based training experience with single sign-on.

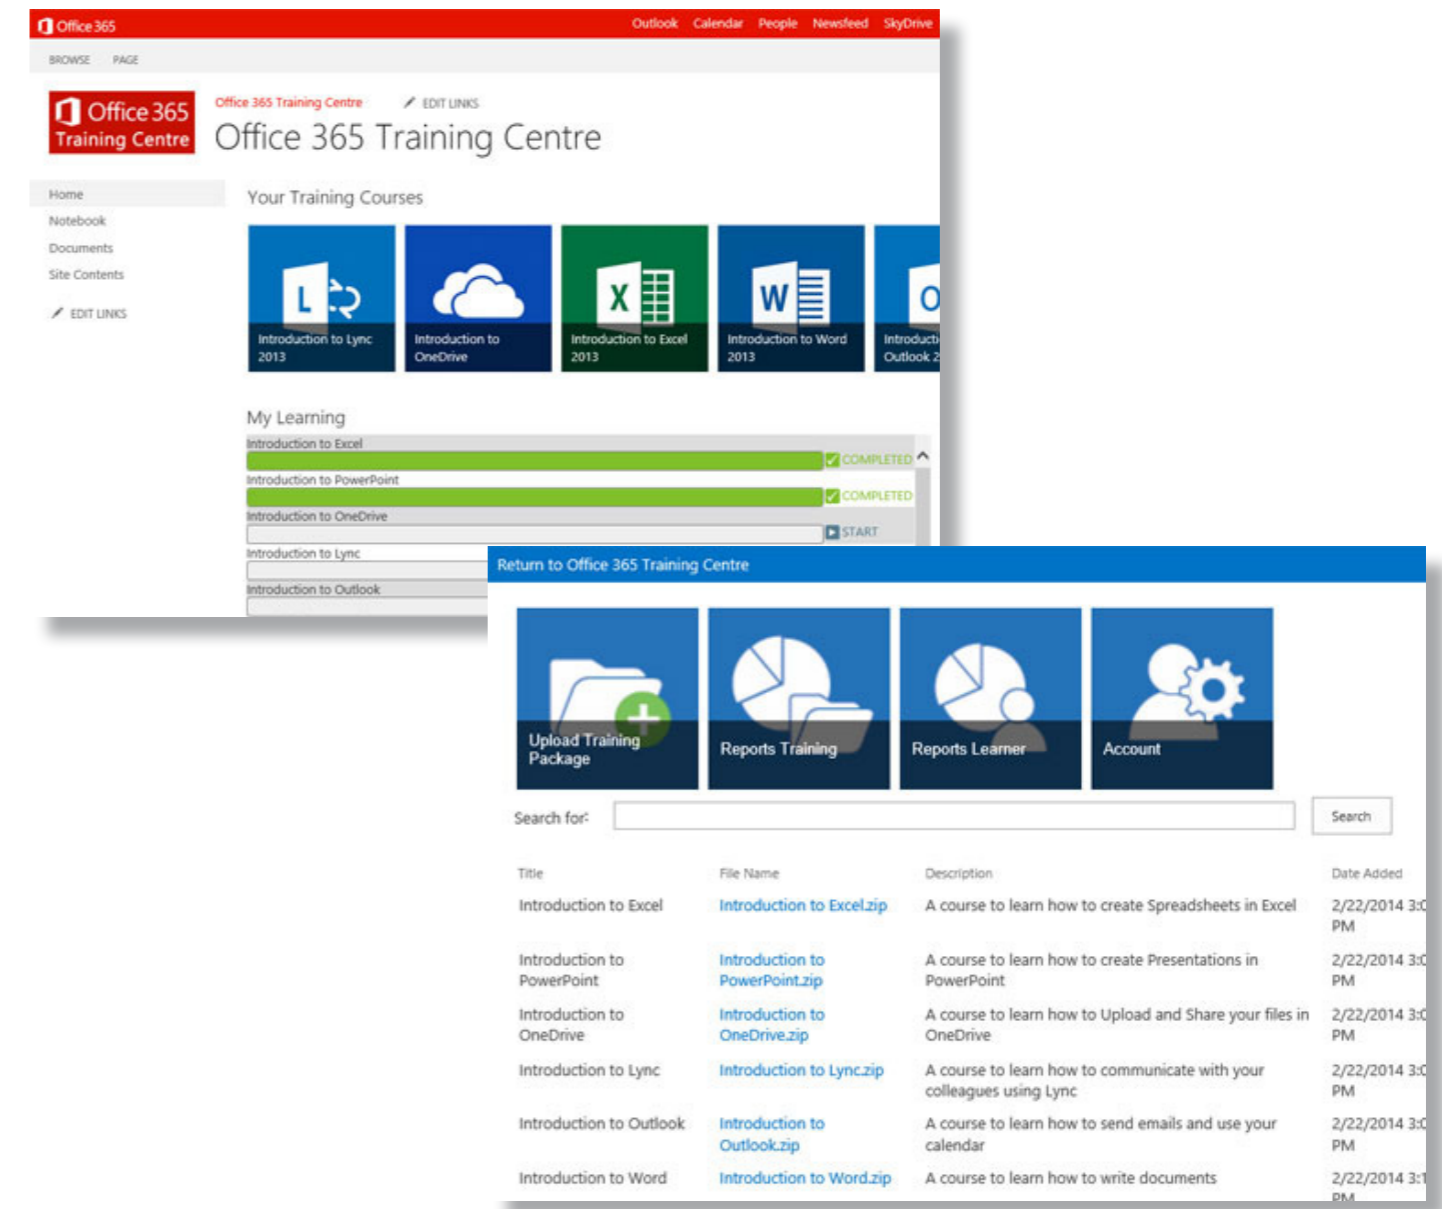

Solution

The new SCORM Player 365 app for Office 365 allows businesses to deploy media-rich courses to users around the globe without having to implement a full-blown LMS. It delivers the flexibility of SCORM, the convenience of a hosted, cloud-based solution, and the collaborative power of SharePoint all at the same time.

The app allows companies to take advantage of the SharePoint security model to deploy any number of SCORM packages and control course access at the user, group, and role levels.

The solution is perfect for companies seeking a fast, easy solution for meeting straightforward training requirements.

SCORM Player 365 is ideal for showcasing SharePoint Online's e-learning flexibility and power, and serves as convincing evidence that SharePoint Online should be thought of as much more than "just another online document library."

Technical overview

System

Use one or more instances of the app on any SharePoint site within Office 365.

SCORM

Supports SCORM versions 1.2 and 2004.

Security

Use SharePoint security to configure which users, groups, and roles can view and work with the training on any page.

Administration

An administrator Web Part is installed with the SCORM Player 365 app. The interface makes it easy to upload SCORM packages into a dedicated SCORM package database and to summarize the course statistics captured by SCORM.

Future plans

The SCORM Player 365 app is the first building block of our new Office 365 learning management system. The Office 365 LMS will consist of different apps that support learning in the cloud.

Planned Office 365 | LMS apps

A Learning Management System running in Microsoft's cloud. The solution includes a suite of LMS apps that provides tools for delivering, tracking, and recording learning activities on the Office 365 platform.

Gradebook app

Collate all results from the Quiz, SCORM and Assignment apps into a single overview.

Assignment app

Create assignments with open, due, and closing dates for each learner.

Quiz app

Over eight different question types ranging from multiple choice to hot spots and drag'n'drop.

Report app

Create detailed reports containing results from the Quiz, SCORM, and Assignment apps.

SCORM app

An easy way to upload, deliver, and track learning materials in SCORM format.

Survey app

Create and execute custom surveys that collect feedback from learners about course content.

How to buy SCORM Player 365

Go to the Microsoft Office Store and search for SCORM Player 365: office.microsoft.com/en-us/store/
A free trial is available.
